Teacher Applicant

Here are some teaching strategies that are applicable and effective in most classrooms. Depending upon style, preference and students, always choose the ones that suit the needs of students..

1. Differentiated Instruction: Learning Station is a strategies that allow teachers to engage each student by accommodating to their specific learning style because every person has a different mind, learns and understand information differently. It offers different way to meet all the students’ needs. Teachers can set up different stations where students will be able to complete the same task, but the level and style is specifically designed for them.

2. Cooperative Learning: The Jigsaw Method gives student the opportunity to work with others and see different points of view. Students learn more effectively when working together rather than alone, and it is also for the improve self-confidence in students. The jigsaw method is effective because every student is responsible for one another’s learning, and students find out quickly that every group member has something equally important to contribute to the group in order to make the task a successful. Students are exposed and use many skills throughout this strategy: communication skills, problem-solving skills, cognition, and critical thinking, this are all essential for a successful academic career.

3. Utilizing technology in classroom-learning is a great way to empower students to stay connected in this era. Technology-rich lessons keep students motivated and engaged longer.
4. Inquiry-Based Instruction implies involving students in the learning process so they will have a deeper understanding of what they are learning. Inquiry-based learning strategies used to engage students to learn by asking questions, investigating, exploring, and reporting what they see. This process leads the students to a deeper understanding of the content they are learning, which helps them be able to apply these concepts in new situations.

5. Graphic Organizers is a simple and effective tool to help students brainstorm and organize their thoughts and ideas in a visual presentation. Simply help students organize information so it is easier for them to comprehend. It can be used for any lesson, to structure writing, brainstorming, planning, problem solving, or decision making. The most popular organizers that are used are the Venn diagram, concept map, KWL chart, and T Chart.
