TEACHING STRATEGIES TO MAKE TEACHING AND LEARNING SUCCESSFUL

by:
Ana Liza F. Guevarra
Teacher III, Tipo Elementary School

Teaching and injecting knowledge to the student’s mind can be really challenging. The student’s attention most of the times are hard to get because they may find it boring or not interesting. It takes talent, dedication and creativity to make teaching very effective. There are many strategies that can be used but you can only choose a certain strategy that fits the class. One strategy is having a good sense of humor to make the discussion lighter. In this way, you can easily get the attention of students and when that happens, it is easy to retain the information into their minds. A boring conversation is not interesting, the same with class discussion. Getting the interest of students is key to their learning. Effective teachers also use teaching strategies that makes them think out of the box. A creative unique style of teaching makes a discussion more interesting because it plays the minds of the students. The teachers can improvise on the way they teach a particular set of students. It can be a different activity or challenges to make them exert more effort. One important strategy for the teachers is establishing house rules for the classroom. This is one of the most basic strategies a teacher can do. If the class is chaotic, it is hard for those students who are paying attention to focus with the lesson. Rules keep the class in order and it trains them to be law abiding. It is easier for the teachers to do his/her job if everything in the classroom is in order. Another method is using technology to make teaching faster and easier. Discussion using computer aided presentations are more pleasing to the eyes, faster and in a more orderly manner. Preparing lesson plans are easier with the aid of the internet and computer. Lapel microphones can help teachers speak clearer and wider. Teaching experience is fun by integrating games to the discussion. Games stimulate the brain making it easier to make the students more attentive. As we know, nothing gets children’s
attention more than a fun game. In addition, it is proven playtime is essential for the development of basic skills for children.
