Alikabok Elementary School
Orani, Bataan

The advancement that existed recently truly changed the world. The technology that flourished made a big impact in the quality of education that we are now offering. The technological era has transformed education into a productive and progressive citadel of learning.

Technology revolutionized the delivery of instructions. Because of the use of technology the conventional way of teaching was turned into a dynamic, interactive and animated process. Teachers make use of computer technology to make effective teaching.

Technology reinvented the teaching-learning process. The interaction between the teacher and learner became more progressive since the participation of the students became more active. Since the students not are technologically inclined, their attention is focused on the teacher who makes use of technology.

Technology raised the standard of education. Education has conformed to better standards since the materials and data being used are more accurate and more precise. Also, there are strategies that are assisted by the computer and this makes teaching and learning more comprehensive and effective.

Technology sped up the means of communication. The communication between and among the people in the school community is easier and better because of technology. Gadgets are not just for game but also an effective tool for communication.
Technology opened the lines for accessibility. The internet that technology now offers allows the access to different website so as to read, gather and synthesis information or data needed for life and learning.

Technology has gone far. It brought so many contributions to the educational field. It keeps on updating and growing so as to serve the people. It is being utilized in schools in order to educate the humankind.

Technological era is here to stay!
