TECHNOLOGY: A MUST IN EVERY TEACHER

by:
Riza Q. Mendoza
Teacher I, Justice Emilio Angeles Gancayco Memorial HS

When we are talking of technology, most will probably think of something mechanical and automatic which to some people find it nerve-racking, something that requires much time to learn on indeed. However, technology, on its affirmative view, makes our daily lives easier in 101 ways.

Smart phones, as an example, are today’s man’s best friend. They can’t probably live without it.

In Education, technology is no longer the wave of the future but “The wave of the Present”, its use in every classroom is imperative nowadays. As teachers, we must be engaged to the technologies that our students are familiar with. This will help us to motivate them more.

From typing of our daily lesson logs to solving of the students’ grades, it is a lot easier if we have the “office” backgrounds. Students will also be more active if we use some Audio – Visual Materials that will enhance the teaching-learning process. Colorful and moving objects while teaching Science is best compared to black and white pictures taken from the book. Theory of Evolution is well appreciated in an animated clip than explaining thru illustrations.

Aside from that, the Department is also updating our system by having the online registrations, enrolment, application and others. These also help us to have more organized files of students, employees, budgets and schools. Therefore, we, teachers, must always update our knowledge, not only to the subjects that we are
teaching, also, to the technologies that seem to have a never ending improvement and development.

We should always remember that we are the 21st Century teachers, when education is part of technology.
