TECHNOLOGY AND TEACHER
Lovely Anna C. Ranera
Instructor/Bataan Peninsula State University

A teacher is considered as the catalyst of change that’s why being one of them we should capable to learn and absorb the new innovations in teaching-learning process.

Facing the new generation now with the use of new technologies seems difficult to most teachers, because most of us are not familiar with the new gadgets, terminologies and even how this new innovation invades the mind and heart of the youth. We have to cope in order for us to understand the behavior of our students.

There are Training Seminars and even Government interventions that help us stimulate to use ICT in preparing our lessons, reports, and classroom activities. Collaboration between educators enhances that skill.

The idea of this is beneficial in both learners and teachers in order to cope and mingle with the fast and evolving world. Despite all the gadget and technologies that we have, still teachers play the important role in the learning process. A teacher will always be the facilitator, moderator, the catalyst of change, classroom manager and a friend or even a best friend. Bearing in our mind there is no best single method, it is in our hands to enrich the mind of our learners.
