TECHNOLOGY IN EDUCATION

by:
Joel Martinez Valdez
Teacher I, Bataan School of Fisheries

The pen danced across the papers, scribbling corrections here and fro. Sweat starts to trickle from the temple as I remembered the stack of papers that have to be checked as well, which is on the right side of my desk. On the other side, manila papers and lesson plans are waiting to be paid attention. Ah! I still have to prepare for tomorrow's class. Tiring, but I know I must finish it.

No matter how tiring it can get, teachers will never stop in order to get things done; tasks which are part of their profession. "Teaching" is not only the task teachers do. Too many paperwork that must be done and passed that sometimes it can be confusing. Materials used for teaching must be in place to avoid the hassle. Everything must be organized so it will be smooth sailing. Teachers undergo difficult times that they lose time for themselves and their family. But as the technology was introduced to the field of education, tasks were eased as gadgets were used to assist teachers. Before, teachers have to endure writing countless paperwork manually. Today, the hard process became the piece of cake, thanks to computers. Even filling and passing documents can be done by using computers. Writing exams and preparing lessons for the class is just one type away. Projectors were also provided to replace the usual manila papers or jotting down the notes on the blackboards. Technology lessened the burdens that teachers have to face.

Although at some point, the use of technology for teaching can be a problem for others. Some teachers are not used to having the electronic devices that instead of finishing jobs fast, it slows them down. Yet that does not mean that they should easily give up. The Department of Education holds seminars regarding the use of these
technological advancements to aid fellow teachers who are having a hard time using them. As a teacher who is also new to using computers for getting things done, I found the seminars very educating. Even though I have a background about them, it is.
