THE EMERGENCE OF MODERN CHALLENGES FOR EDUCATORS

by:
Florence R. Nazareno
Teacher III, Pantalan, Luma Elementary School

Teaching has been a difficult occupation in the modern world. Educators must develop their teaching skills to offer the best educational experience to students of all ages, including toddlers, preschoolers, elementary school students, high school students, and graduates. They must control their emotions and actions when dealing with various types of students.

Teachers are seeing class sizes increase by more than five students a year these days. The learning environment for students becomes more complicated as the class size grows. Furthermore, each educational institution has its own set of rules and regulations that teachers must follow. They must follow the course and curriculum and limit themselves to just coursework. If permitted by the authorities, teachers can and should devote additional time to properly teaching students and clarifying any questions they may have.

Teachers face a multitude of opportunities and obstacles in the twenty-first century. Teachers today must be on the lookout for new developments and keep up with cutting-edge technology. They must also contend with changing assessment procedures, increasing class sizes, and children's shifting expectations for teaching methods.

Various technological advances have been incorporated into our everyday lives as a consequence of the industrial period. These advancements have also affected classroom education. It is now important for teachers to use emerging technologies in their classrooms for educational purposes. Although modern gadgets such as smartphones, tablets, and other similar devices help to improve the teaching-learning process, they
often serve as a distraction, dividing students' attention. Using technology optimally, respectfully, and professionally is one of the most challenging aspects of becoming a teacher today.

Owing to the rise in classroom size, a more diverse community of students and their learning styles has arisen. Teachers are faced with the task of covering a specific course/topic while still attending to students' different learning needs. Dealing with different learning styles has also become a problem for teachers. To have the best learning opportunities, they must perform research, work hard, and formulate creative teaching methods. Furthermore, today's classroom teaching necessitates a large amount of educational material. Teachers have inadequate time and money to establish an efficient instruction plan.
