THE FUTURE IN PHILIPPINE EDUCATION

by:

Editha C. Santos
Teacher II, Orani North Elementary School

A lot of brilliant changes are happening in the field of education particularly in the Philippines. It is not surprising that more developments may come in the future. Things are coming for the best sake of the Filipino learners and of the quality of teaching instructions.

In terms of curriculum, the K to 12 Program that we enjoy today is indeed suitable and advantageous for Filipino learners. In the years to come the fruits of this curriculum will eventually be harvested not only by the graduates but also for the entire society as well having produced better citizens. Thus, the curriculum will continue to shine and will shape prospective learners.

With regards to teachers, we expect teachers who are more trained and well-equipped. Majority of teachers have also attained further education for professional growth. Likewise, they are more adept in their respective fields of specialization in order to develop and hone the students to various skills and knowledge. Teachers are better, wiser and smarter.
Talking on facilities, the government will provide more state of the art and world-class learning facilities, buildings, laboratories, libraries and other ancillary rooms for the students to enjoy.

These places will be made more conducive and safer for the Filipino students particularly those in public schools.

The students that we have in the future are more aware in the various fields of studies. They are more inquisitive and more interested in learning the prescribed curriculum and they are more focused in engaging in experiential activities. Since they are technologically inclined, they will take advantage of the skill to search for more ideas, knowledge or tenets which their curiosity would command.

The support of the community in the future may possibly be more enormous. Realizing that the community and the school should work hand in hand, the people in the school and the surrounding people may find themselves working for a common goal for the benefit of the learners.

International linkages are also viable in the field of education. Our educational agency may find practices and trends from other countries that are applicable to our students. With this, we could establish partnerships and linkages with our neighboring countries or even with far nations. This could help us achieve international standards and international understanding.
These are just few things that we may anticipate in the future in the field of education in our country. Remember that our educational system is continuously progressing and attaining greater heights and will very soon compete in the world arena.
