THE GREAT SHIFTS IN TEACHING

by:
Gregorio B. Castro
Master Teacher I, Bonifacio Camacho National High School

Veteran and novice teachers should be able to consider the new model in the teaching profession. Since education is a continuous process, it also keeps on evolving in order to address the needs of times, society and learners.

Various changes existed recently in order to improve the educational system for the benefits of the learners and of the society. In the recent years the field of education has implemented several changes to improve the quality of education.

The employment of technology. They say that the greatest change in the recent years is the emergence of technology. It is truly evident that technology made a big change in the field of education because it makes teaching delivery better and faster.

The teacher became a facilitator. The teachers also shifted their roles. They are now acting as facilitators in the classroom for they consider the child as the center of the educative process. They train the students to discover learning using their own efforts making them more independent and dynamic.

The so called cooperative learning is introduced. The spirit of cooperation is being promoted or advocated in the school setting nowadays. The teachers are forming groups among students for them to work together for a common purpose.

The collaborative learning has emerged. The pooling of ideas among the students is being patronized in the present time particularly in the school. The students share ideas and synthesize them in order to derive on a certain generalization.
The Higher Order Thinking Skills is emphasized. The student’s critical thinking is developed through HOTS. The students are being taught to think logically and critically on various issues and matters. They are not just simply accepting ideas rather they are analysing each detail from the things being told to them.

The instructional devices are improved. The teachers are being given enough time to prepare their instructional materials. Whether with the use of technology or simple materials, the teachers make use of the creativity and ingenuity in making novel instructional materials in capturing the interest of their students.

The teaching models are restructured. The teachers at present are being requested to follow new teaching models as mandated by the new curriculum in order to comply with the recent demands in the teaching profession. Thus, this will aid them in improving the delivery of education to the learners.
