THE MARVELS OF INTERNET COMMUNITY ON DISTANCE LEARNING

by:
Ialyn E. Piñero
Teacher III, Alasasin Elementary School

The wonder of social media is plaguing almost every aspect of school process, citing the fact that we have moved from conventional face-to-face learning to distance learning. In the most basic sense, social media has changed the way people in the educational system interact with one another, discover, research, and exchange knowledge, which has consequences for educational leaders.

Social networking has justly established the latest acceptance for contact, occurring in the realm of today. It has prompted a major change, but there has also been a deeper move in education that has empowered large innovation appropriation. This deeper trend has been one of almost conviction, compassion, and engagement.

However, in today's digital age, Zoom and Goggle come together, which are very useful in education. Because of their social features, I think these two are more suitable for interacting with teachers and students and do not provide distractions, unlike Facebook and Instagram.

We should not escape the fact that the school might well be doing great because of the manifestation of social media, a growing expectation of technology in schools at hand. However, we couldn't overlook the fact that there are disadvantages as well. And we should be trained and ready with stuff like that as future educational leaders.
