Our pupils nowadays are very advanced. In fact, they will not get lost even without a map. They simply have to use their phones and they can reach their destinations.

That thing is very basic which teachers are teaching in the classroom. But now, it seems like they won’t be listening to us any longer. They already find it boring and useless to hear our inputs. They are thinking that they can still make it even without our presence and help.

It is somehow alarming, indeed. I miss those days that when you look at the pupils in the eye, it is still beaming with excitement and anticipation of the new lesson to be unfolded. Now, majority of their eyes are covered with glasses, blurred by too much exposure and addiction to online games and social media.

Before, only those in college are having eye bags. Now, as early as elementary, they have formed those dark circles already. Previously, pupils were sleepy because of reviewing, now they’re like that simply because they stayed up late watching and playing online games.

In the midst of this condition, I can’t help but wonder where I should stand. Sometimes, I also want to ask myself if I should still stand. I do not know my purpose anymore. It seems like technology has taken my learners away.
But then, as I contemplate, I told myself that no matter how advanced their world might be, I still have a role to perform: to guide and lead them in their process of getting and reaching their dreams no matter what.
