THE PERKS OF POSTGRADUATE STUDIES TO TEACHERS

By:
Amelia F. Retuta
Master Teacher II, General Lim Elementary School

Good educators are lifelong learners. Aside from preparing learners to be equipped with knowledge and skills for their future advantage, teachers should also consider themselves to learn and grow. Just like technology, the education field evolves in a fast pace that the techniques, skills, and technologies become obsolete within a period of time. With all of these changes, teachers are opted to continuously incorporate new strategies and tools into the learning process to upsurge the learning development of their students. One of the constructive ways to explore new strategies is through enrolling in post graduate studies.

Enrolment in postgraduate studies, be it Master’s or Doctorate degree, may sound laborious and expensive to a few teachers. It requires time and effort to attend to school every Saturday or on a schedule which a teacher-enrollee is required to appear at, or to accomplish a bunch of modules and written reports and submit them on a deadline. Such matters necessitate a teacher-enrollee to release money as payment for any expenses he or she is accountable for. However, enrolling in postgraduate studies is an important consideration for educators, especially those who want to continue to learn and grow in the field of teaching.

Bachelor’s degree programs have provided neophyte teachers the recognition of the facts and theories related to teaching. However, the mere fact that they just recognize them does not provide them enough background knowledge and full comprehension of how to integrate these facts and theories into and strengthen diverse teaching practices. What lacks the process can only be fulfilled through earning an advanced degree program.
which offers teachers the understanding of how theories practically work in real teaching scenarios.

Moreover, teachers who decided to enroll and continue in postgraduate studies can be refreshed with the essential concepts they learned from their professors and instructors, their colleagues, and their experiences during their baccalaureate days. Modular activities, concept papers, reportorial sessions, and the like can serve as tools to recall those learnings. Recalling such concepts can be beneficial to teachers who are devising some ways in classroom instruction and management.

In addition, pursuing a postgraduate degree means making oneself qualified to a variety of roles in the educational system, most especially those higher-ranking positions. Such programs often focus on leadership and administration. Hence, a degree can help you obtain a qualified job as a school administrator, a principal, or even an educational supervisor. Earning such degree can expose a teacher to various opportunities that equate his or her skills and competencies developed throughout the course. Also, these programs can make someone help people to understand the psychology behind teaching, which can lead him or her to be a better candidate for positions such as school guidance counselor or special needs teacher.

Other perks such as diplomas, citations, and higher salary can also be considered. Nonetheless, with all of these benefits, one must bear in mind that a genuine teacher is not after what he or she receives. They should realize that the real purposes of being a postgraduate degree holder are expanding their comprehension on teaching, seeing their students succeed, and assuming leadership roles.
