THE ROLE OF A TEACHER FOR QUALITY EDUCATION

by:
Acelyn M. Aparilla
Orion Elementary School

The teacher plays an important role which affects the learners learning process. They can be a model, manager, facilitator, and evaluator.

The teacher can be a model to the learners in desirable patterns of behavior and values. A manager of the classroom situation who determines the kind of psychosocial climate that will prevail in the classroom. A facilitator of learning who utilizes appropriate and effective teaching methods depending on the learning situation. An evaluator of learning who utilizes the results of evaluation as the basis for further learning of students.

Effective learning is also facilitated by feedback. For this reason, the systematic evaluation of student learning becomes an integral part of teaching-learning process.

A good teacher produces good quality of learners. There’s a saying “A rising tide lifts all boats.”

As a teacher, it is important for us to have training for professional growth and development to meet the demands of our learners. Classroom setting become boring when routinary activities are being done.

I believe that it’s a call for us teachers to do our part to the best as we can to produce a good quality learners.
