Sped Teacher III Alasasin Elementary School Mariveles, Bataan

Efforts to carry out educational work in schools are determined by the fact that education is a kind of thing that deals with people, with individuals. Departing from the fact that each has its distinctiveness, which differs from one another, hence, the educational approach is diverse for one and all and is carried out in a particular manner.

The teacher plays a primary role in the apprehension of school work. In more than a few ways, the teacher is a major influence in the understanding of educational work is discussed. Not only in terms of professional growth in the context of individual change as a professional and educational protagonist but also in terms of changing schools as an organized educational entity.

Through this, our problems or interest is focused on what is known as the teacher's personality, the teacher's attitude towards the student, his style and his way of working, the methods and technique that the average teacher or teacher chooses his educational work.

Moreover, in the current situation, as a result of the widespread pandemic of Covid-19, teachers are participating and contributing to the improvement of the educational system with their technical skills, which is a relevant factor in the training and preparation of educational and methodological plans, and organizes and carries out work on student learning.

The educational process and people as social beings are reciprocally linked to each other from the life of man or humankind and will remain so. This shows that human and
social development depends on education and training as processes that allow for the development of knowledge, skills, and human experience. To achieve this growth, we must inevitably have a leader in the education process that will prepare, manage and assess his and other education work, and teach them that he is a teacher. Teachers are also an integral part of the scheme itself.
