THREE IMPORTANT SKILLS TO BE LEARNED

by:
Helen L. Paule
Teacher III, Bangal Elementary School

There are lots of skills to be taught in school. These skills are the most important to be learned during the early stage of learning. The foundation of all the learning process. These skills were they can used in their day today life. These skills are:

1. Writing

Writing is an important part of a child’s education. At school writing is an integral part of a child’s education. Writing is a lifetime required skills most likely during their younger, more formative “learn to be a good writer” years. This is why it is so important to learn and practice the skill of writing from a young age. Otherwise it will come back to haunt them when they are an adult. Writing is intricately linked with communication. Children will need to learn how to express their thoughts and feelings clearly via the written word. Writing helps with organization. All good writing has a proper structure to be followed. The more a child practices writing, the easier it is for them to plan and structure their writing according to this plan and work out what goes where and when. It helps them to further develop their decision-making skills. Writing’s child’s skill of inquiry. To write, a child will need to do research and collect data. What sort of information do they need to seek in order to support their argument? Where will they find this information? They will become not just better writers, but better researchers too. It helps with memory retention. Ask any teacher one of the best ways for pupils to study and learn their material and they will say it involves writing notes down! The more confident a child is with writing, the more confidently he/she can tackle his/her task.
2. Reading

Reading is a mental process. It is a complex cognitive process of decoding symbols to derive meaning. Help pupils develop the knowledge, skills, and experiences they must have if they are becoming competent and enthusiastic readers. Reading is important to one’s life because it develops the mind ….Understanding the written word is one way the mind grows in its ability. The reason why teachers teach children to read to help them develop their language skills and also help them learn to listen.

3. Arithmetic

Number or rather MATH is incredibly important in one’s life without realizing it by the pupils. The laws of mathematics govern everything around us, and without a good understanding of them, one can encounter significant problems in life.” Mathematics makes our life orderly and prevent chaos “, writes Chanda Biswas. Teaches us to think logically and orderly.
