TIPS IN STRENGTHENING VARIED LEARNING STYLES AMIDST PANDEMIC

by:
Rachel A. Naguiat, LPT

When it comes to understanding information, there is no one-size-fits-all approach. Everyone is different, yet students have been inquiring about their learning styles.

As parents, teachers, and tutors, we must establish an atmosphere in which the students are free to explore beyond the boundaries that are commonly imposed on them. One of the ways we can help children discover their skills and abilities, as well as their flaws, is to encourage them to experiment and be creative. Teachers can make learning interesting and exciting for students by welcoming, challenging, and enabling them to pick their own manner of working if they know their students' learning styles.

Learning style is a person's preferred method of processing new information for effective learning. It's more about how students learn than what they learn when it comes to learning style. Each student's learning process is unique; even in the same educational setting, learning does not occur at the same degree or quality for all students. Learning styles may be beneficial in both students and educators in understanding how to enhance their learning and teaching methods. The learning styles of students can be used to understand more about their preferences. Understanding learning styles may aid in the development, adaptation, and production of better curriculum and educational programs.

However, whatever your learning style, you've probably had to adapt a lot in the past year. By the year 2020, as the pandemic persists and has not yet stopped, the Department of Education implemented what they call Virtual Learning, or what we call...
Online Classes. During this unusual time in education, many students and educators need to learn a completely new way of doing their classes. Students may help themselves succeed by knowing how they study best as well as how to adapt that learning style for the COVID-19 period.

Here are some tips and techniques to help every student adapt during the pandemic. Educators and psychologists have classified learners into three categories: visual, auditory, and kinesthetic.

Tips for Visual learners

Visual learners must limit distractions when learning at home. Instead of studying next to a window and being distracted by the outside world, set up a personal workspace and make class the most interesting thing in your sightline. Visual learners can also create their own diagrams, drawings, or even doodles; taking visual notes helps improve information retention.

Tips for Auditory Learners

Because online classes tend to focus a higher emphasis on sound and listening, auditory learners can excel in online learning situations. Auditory learners may benefit from wearing headphones in class to filter out other noises. Turning off the screen might occasionally assist auditory learners focus on the content if their lecturers don't mind. Reading aloud can also help auditory learners.

Tips for Kinesthetic Learners

Kinesthetic learners benefit most from hybrid and virtual learning settings. Walking around during a lecture is typically discouraged upon by teachers, but in a virtual setting, kinesthetic learners can switch on recorded content and move while listening to or studying it. A standing or walking desk can also assist kinesthetic learners in keeping active on participating in their courses.
What works for one learner may not work for another, and successful students typically adapt a variety of techniques. So go ahead and explore with a few different techniques to figure out what works for you.
