The students may have their own choices of the most significant learning areas in the school. They may choose English, Math, Science, Social Science, Filipino, Values Education or Technology and Livelihood Education. Focusing on TLE, this subject is now increasingly gaining its importance on the part of the learners for different qualified and valid reasons may be derived.

Technology and Livelihood Education has its impact and usefulness in the lives of Filipino learners:

As part of the modern world, TLE is introducing several life skills. This subject area covers all the skills from different four major areas namely home economics, agriculture, industrial arts and entrepreneurship.

It is also working for productivity of the students for with it industry is being learned. They are being trained to instill and imbibe the spirit of hard work in different activities that show man’s productivity.

It is preparing the students for further education. By learning the basic skills in TLE, the students are able to be acquainted with the kind of orientation that they need in order to decide on for the further education that they may go through particularly in college.

It is providing livelihood training. The students are being trained on how to have a source of revenue by planting crops, raising animals, baking, and cooking other foods.
for sale. The students are being equipped with the right information in order to have a successful livelihood.

It is also introducing business, entrepreneurship. Upon learning teaching products for the people’s consumption, the teachers are supplementing it with the way to manage a business or a small enterprise. The students are learning to be entrepreneurs and how to fully embark in the business industry. These students may be the future owners of successful food chains, groceries, bakeries and other big establishments.

It is also leading the students for future work. Aside from business, each student is being taught on how to be an efficient and competent employee. It is possible that in the future, a student may work in an office, hotel, restaurant and other establishments and there are skills and knowledge that are being provided in TLE that they may apply.

It is also featuring practical home activities. It is a mere fact that several home skills are enhanced in TLE. The simple tasks of cooking, cleaning, washing, planting, watering plants, sewing and washing the dishes are all highlighted for the learners’ benefits.

It is also paving the way for technology. Computer technology is the latest technology that is being shared to the learners. Through TLE time, the students learn the basics and even advanced knowledge in computer technology. They are also given a chance to have hands-on sessions for practical applications.

Technology and Livelihood Education (TLE) has a big influence and effect on the education of the students and it is here to boost the productivity and advancement of the learners.
