TYPES OF KNOWLEDGE

by:
Sylvia D. Gatus
Teacher III, Orani National High School

Knowledge is very essential in one’s develop and growth. But do you know what kind of knowledge do you acquire in your daily learning? It is about time that we unravel the types of knowledge that we owe to have in our lives as human beings.

Procedural knowledge pertains to the information that requires the accomplishment of tasks or activities in order to test strategies and skills.

The students are able to learn and achieve knowledge when they are required to perform activities like experiments, group activities and the like.

Conceptual knowledge certainly refers to concepts that show relationship and connected ideas for better understanding. It is also used for purposeful and reflective learning.

The conceptual knowledge are readily available in books and other educational texts. The students have to read them and be able to form understanding regarding the said reading materials and be able to find their essence and relationship.

Implication is another kind of knowledge that shows the interpretation of facts and information. Intelligent insights are also derived in implication.

The students may have the implication knowledge if they try to find the real meaning of what they read or encounter upon studying and learning in the school. Stories, poems, lines, events, things and other matters have implications that are related to people.
The teacher has to consider these kinds of knowledge in the formulation of the objectives for the lessons and in order to apply the proper approach or strategy in attaining the objectives.

Procedural knowledge, conceptual knowledge and implication knowledge are all contributory in the fullest learning of an individual.
