UBIQUITOUS LEARNING

by:

Gideon N. Castillo
Teacher II, Magsaysay National High School

Ubiquitous learning is giving the education to our learners available on their time availability ang in the place where they are comfortable to study. This kind of learnings will give an advantage to the learners who have the capabilities to have digital advancements. First class countries nowadays implemented the ubiquitous learnings especially those countries who have technology advancements. In this set up, lesson content and learners have interactions.

Looking back on the most materialized advantage of Ubiquitous Learning is the availability of more knowledge, wherein the information is not just available inside the classroom but it is made searchable on the Internet of Things which is comes from the different ideas of people and expertise around the globe. But there is always another side of the scenario, Ubiquitous Learning or U-Learning required computing technologies such as technology infrastructure which gives connection to the different nodes all over the world. Thus, for the school who haven’t connected to the internet Ubiquitous Learning is a challenge and on the other an opportunity to continuously improved their computing capabilities
