In the midst of technological influx, the books still find their ways to be recognized specifically by the learners. The textbooks in particular are presented to serve the learners and to yield quality in instructions.

A book is like a gift you can open again. One of the great forms of books is a textbook.

Textbooks present facts. The facts are essential in determining the right data, statistics and other valuable information. Pupils may avail of factual information once they are fond of using textbooks.

Textbooks provide selections. There are reading selections that are considered very interesting and very educational in textbooks. These selections are products of literature or non-fiction stories.

Textbooks give exercises. All learning areas provide varied exercises. Math textbooks provide problem solving or mathematical exercises on the other hand English books feature exercises on the use of language.

Textbooks show illustrations. It is for better understanding the illustrations like drawings, diagrams, charts and tables that are included in textbooks. The illustrations provide vivid representation of the concept or idea.

Textbooks cite guide questions. These questions are given to test the understanding of the learner regarding a selection, topic or issue. It helps the learners analyze the selection or to think critically on certain matters.
Textbooks are valuable creations and they play a vital role in the child’s accumulation of knowledge and skills.

Thus, textbooks are significantly made in order to address the curriculum in the educational system and structure of knowledge in the country and in order to meet the learners’ needs.
