WHAT DO EDUCATORS LEARN DURING THE PANDEMIC?

by:

Jenalyn D. Padre
Master Teacher I, Ipag Elementary School

In the midst of pandemic, educators face tough challenges in educating the learners, thus, they should adapt pandemic-driven remote teaching. Widespread inequalities in education and society are also emphasized as schools were forced to shift from normal to distance learning, discrepancy became obviously visible: especially those children who are in state of poverty, hunger, psychological state issues, lack of information and accessibility in the use of technology applied to their studies. The effect of pandemic made the educators left with no choice, but to double the efforts they are exerting to satisfy not only the educational needs but also the physical, and social-emotional needs of their learners.

Educators learned to embrace this sort of modality to bring a high-quality education so that the undeniable inequities of our society within the platform of education will be put to end.

The pandemic forced school leaders and teachers to reach out their communities in ways they never had done before. Lot of families do not have computers or internet access and some parents do not have enough knowledge of the online educational platforms such as, using Zoom and Google Classroom to guide their children to their studies at home. But parents as well as their children found hope. With the assistance of the educators, for being aspiring kind of people to a new paradigm in an exceedingly way of using what they have learned during the pandemic about the facility of innovative instructional materials, and community partnerships, the schools can still provide a high-quality and equal education among the learners of today.
