WHAT TO DO WITH SLOW LEARNERS

by:

Elena W. Roque
Teacher III, New San Jose Elementary School

Slow learners who usually do poorly in school need support. They need interventions in order to address these needs. The following are recommended that could really help.

1. A teacher may provide a better environment to promote attentiveness. At the same time, learning barkada is advisable.
2. Give more hands-on work rather than merely reading the book.
3. Don’t always make them complete. Shorter tests and oral testing may do to evaluate their daily performance.
4. Learn more about them. Know their interests then help them develop their inborn talents.
5. Pair them with brighter students who will help the slower student and be humble about helping.
7. Eliminate as many distractions as possible.
8. Show patience! Tutor after school in help classes, if necessary.
