WHAT TO DO WITH VISUAL LEARNERS

by:
Meliza C. Marigmen
Teacher II, Pita Elementary School

Students all learn in different ways and they often learn more than one way at a time. Students might learn by seeing, doing or hearing. People who learn by seeing square measure known as visual learners. They like to read and see things on paper to absorb knowledge in front of them. Instructors may teach visual learners by using books and workbooks. They prefer to learn by reading and that they bear in mind new info by observing it. At the same time, many visual learners like quiet when they are trying to concentrate. Noise can distract them from the words on the page.

Besides, a teacher should train visual learners to picture information in their heads. Create lists and diagrams to represent material they have to find out. When they try to recall information later, they can visualize the lists and pictures to remember the facts they learned. More so, teach them to spell by picturing words in their head.

Visual learners should look at a word, look away, visualize the word and then write it down. They see to learn so showing them spelling words on paper helps them remember.

To maximize learning, make flashcards for visuals learners. Use colorful pens and different styles of writing. You can add photos or diagrams on the back to create a visual picture then encourage visual learners to study facts, memorize them and then write them down.
