WORLD INNOVATIVENESS

by:
Ofelia G. Medina
Teacher II, Orani North Elementary School

The education is now the center of development and discoveries. It is wonderful to think that the current generation of students is lucky to enjoy these advantages as they go along with their students.

Interactive learning process. Interactive learning is what the educational world applies today in order to capture the attention and to attract the interest of the current students. This makes the teaching-learning process very active and lively.

E-learning procedure. The use of electronics may help the students reach other people through the use of the internet. The students will be able to gain access of knowledge and information through the E-learning process.

Online instructions. As the interacting version of E-learning, the so-called online instructions help the teacher and teacher meet and study through the internet. The teacher may at the same time give instruction to numerous students through the internet.
Robotics manipulation. The wonders of robotics are now being introduced to the learners. They are taught how to assemble the parts of the robot and are trained to manipulate them in such a way that it will be helpful to man.

Animation in learning. Film showing in the classroom is made more wonderful through animation. Animation is more inviting due to its characters and stories. The students truly learn a lot through animation.

Computerized learning system. The usual and traditional classroom is now transformed into an innovative setting due to computerization. The teacher does not only use manual materials in teaching but also technology that is better and inviting.

The world of education is filled with innovations...teachers and students must avail of it!
